

DESIGN | BUILD | MANAGE

Project PROFILE

CLIENT: Camp Robinson, Building 1600
(National Guard)

LOCATION: North Little Rock, AR

PROJECT: New Data Center

PROJECT SUMMARY: Provided planning, design, product procurement and project oversight to implement a new datacenter. This required future load estimation and precision planning to handle anticipated loads without oversizing infrastructure.

PROJECT RESULTS: Supplied multiple parallel runs of hot-swappable overhead power distribution to give expandability without adding new circuits. InRow AC units achieved highest density and efficiency solution for customer with maximum scalability. 225kVA static UPS System provided precision backup power.
